## Dear colleagues

Data analysis is the most crucial part of any research. Data analysis summarizes collected data. It involves the interpretation of data gathered through the use of analytical and logical reasoning to determine patterns, relationships or trends. High-quality statistical analysis in research is vital to making it clear what the importance of the research is and helping future researchers build on your work

This workshop is intended to give you a hands on training on data analysis using the Jamovi software along with insights into basics of data handling
